Document Change History		
Release	Changed by	Change Description
4.0.3	AUTOSAR Administration	<ul style="list-style-type: none"><li>• Update of wake-up validation (power-up)</li><li>• Several minor corrections (typos and wordings)</li></ul>
3.1.5	AUTOSAR Administration	<ul style="list-style-type: none"><li>• Literals changed names:</li><li>• 1. the imported LIN interface parameters (from LINInterface) are removed, instead 3 local parameters are introduced.</li><li>•</li><li>• LINIF_TRCV_MODE_NORMAL -&gt; LINTRCV_TRCV_MODE_NORMAL</li><li>• LINIF_TRCV_MODE_STANDBY -&gt; LINTRCV_TRCV_MODE_STANDBY</li><li>• LINIF_TRCV_MODE_SLEEP -&gt; LINTRCV_TRCV_MODE_SLEEP</li></ul>
3.1.4	AUTOSAR Administration	<ul style="list-style-type: none"><li>• Initial release</li></ul>

## Disclaimer

This specification and the material contained in it, as released by AUTOSAR, is for the purpose of information only. AUTOSAR and the companies that have contributed to it shall not be liable for any use of the specification.

The material contained in this specification is protected by copyright and other types of Intellectual Property Rights. The commercial exploitation of the material contained in this specification requires a license to such Intellectual Property Rights.

This specification may be utilized or reproduced without any modification, in any form or by any means, for informational purposes only. For any other purpose, no part of the specification may be utilized or reproduced, in any form or by any means, without permission in writing from the publisher.

The AUTOSAR specifications have been developed for automotive applications only. They have neither been developed, nor tested for non-automotive applications.

The word AUTOSAR and the AUTOSAR logo are registered trademarks.

## Advice for users

AUTOSAR specifications may contain exemplary items (exemplary reference models, "use cases", and/or references to exemplary technical solutions, devices, processes or software).

Any such exemplary items are contained in the specifications for illustration purposes only, and they themselves are not part of the AUTOSAR Standard. Neither their presence in such specifications, nor any later documentation of AUTOSAR conformance of products actually implementing such exemplary items, imply that intellectual property rights covering such exemplary items are licensed under the same rules as applicable to the AUTOSAR Standard.

# 1 Introduction

This specification specifies functionality, API and configuration of the module LIN transceiver driver. It is responsible to handle the LIN transceiver hardware on an ECU.

A LIN bus transceiver is a hardware device. It is the interface between LIN protocol controller and physical LIN bus. On one hand the transmit data stream of a LIN protocol controller is converted into LIN physical layer compliant bus signals. On the other hand LIN bus data streams are converted into protocol controller input signals. A LIN protocol controller is typically a microcontroller implementation.

Most LIN transceivers support power supply control and wakeup via the bus. A lot of different wakeup/sleep and power supply concepts are available on the market.

In addition so called system basis chips (SBC) are available. Beside LIN transceiver functionalities these devices provide additional features, e.g. detection of electrical malfunctions (e.g. short-circuit to dominant level (GND)), power supply control, advanced watchdogs, LIN transceiver, SPI etc.

## 1.1 Goal of LIN transceiver driver

The target of this document is to specify interfaces and behaviour, which are applicable to most current LIN transceiver hardware implementations.

**[SWS\_LinTrcv\_00042]** [ The LIN transceiver driver abstracts the applied LIN transceiver hardware and covers hardware independent interfaces to the higher layers. It abstracts also from ECU layout by using APIs of MCAL layer to access LIN transceiver hardware.] (SRS\_BSW\_00162)

## 1.2 Explicitly uncovered LIN transceiver functionality

Some LIN bus transceivers offer additional functionality like ECU self test or error detection capability for diagnostics.

ECU self test and error detection are not defined within AUTOSAR and requiring such functionality in general would lock out most currently used transceiver hardware chips. Therefore, features like “ground shift detection”, “selective wakeup”, “slope control” and others are not supported.

## 2 Acronyms and abbreviations

<b>Abbreviation</b>	<b>Description</b>
API	Application Program Interface
Channel	A channel is a software exchange medium for data that are defined with the same criteria.
ComM	Communication Manager
Dem	Diagnostic Event Manager
Det	Default Error Tracer
Dio/DIO	Digital input output, one of the SPAL SW modules
EcuM	ECU State Manager
ECU	Electronic Control Unit
Frt	Free Running Timer
Gpt	General purpose Timer
ICU	Interrupt Control Unit
ISR	Interrupt Service Routine
LinTrcv	Lin Transceiver Driver
MCAL	Micro Controller Abstraction Layer
n/a	Not applicable
PDU	Protocol Data Unit
SBC	System Basis Chip; a device, which integrates e.g. LIN and/or LIN transceiver, watchdog and power control.
SPAL	Standard Peripheral Abstraction Layer
SW	Software
SPI	Serial Peripheral Interface
SPI Channel	A channel is a software exchange medium for data that are defined with the same criteria: configuration parameters, number of data elements with same size and data pointers (source & destination) or location. See specification of SPI driver for more details.
SPI Job	A job is composed of one or several channels with the same chip select. A job is considered to be atomic and therefore cannot be interrupted. A job has also an assigned priority. See specification of SPI driver for more details.
SPI Sequence	A sequence is a number of consecutive jobs to be transmitted. A sequence depends on a static configuration. See specification of SPI driver for more details.

### 3.3 Related specification

AUTOSAR provides a General Specification on Basic Software modules [6] (SWS BSW General), which is also valid for LIN Transceiver Driver.

Thus, the specification SWS BSW General shall be considered as additional and required specification for LIN Transceiver Driver.

## **4 Constraints and assumptions**

### **4.1 Limitations**

The used APIs of underlying drivers like DIO or SPI shall be synchronous. Implementations of underlying drivers, which do not support synchronous behavior, cannot be used together with LIN transceiver driver.

### **4.2 Applicability to car domains**

This driver might be applicable in all car domains using LIN for communication.

## 5 Dependencies to other modules

<b>Module</b>	<b>Dependencies</b>
LinIf	All LIN transceiver drivers are arranged below LinIf.
ComM	ComM steers LIN transceiver driver communication modes via LinIf. Independent steering of each single LIN transceiver channel is possible.
Det	Det gets development error information from LIN transceiver driver.
Dem	Dem gets production error information from LIN transceiver driver.
Dio	Dio module is used to access LIN transceiver hardware connected via ports.
EcuM	EcuM gets wakeup information from LIN transceiver driver via LinIf.
Icu	Icu module might perform LIN transceiver hardware interrupts.
Spi	Spi module is used to access LIN transceiver hardware connected via Spi

### 5.1 File structure

#### 5.1.1 Naming convention for transceiver driver implementation

**[SWS\_LinTrcv\_00070]** [ In case different LIN transceiver hardware implementations are used in one ECU the function names of the different LIN transceiver drivers must be modified such that no two functions with the same names are generated. The names may be extended with a vendor ID or a type ID.]  
(SRS\_BSW\_00347)

#### 5.1.2 Code file structure

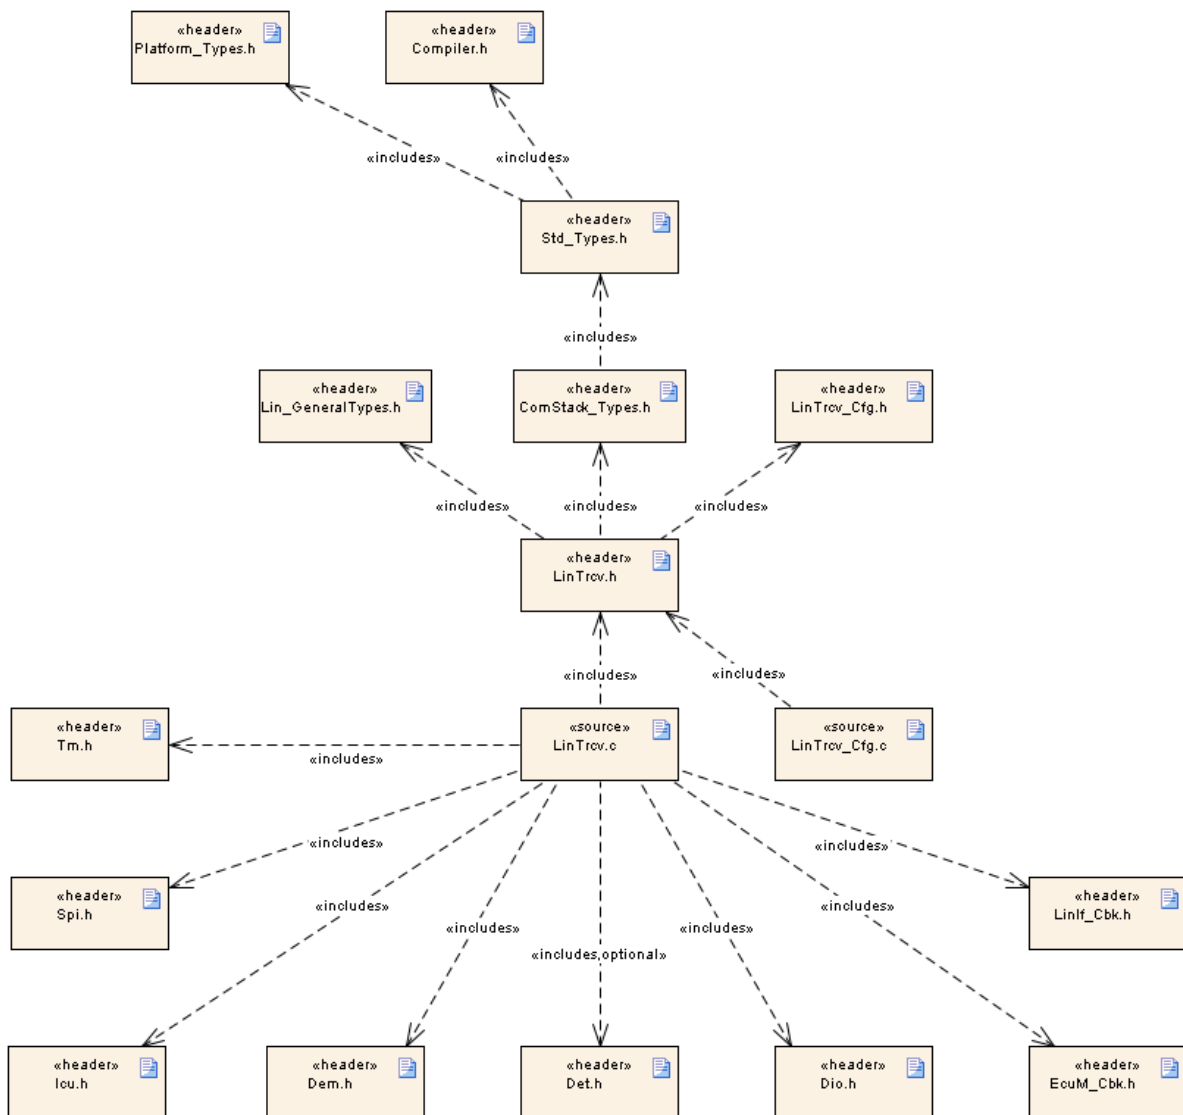

**[SWS\_LinTrcv\_00065]** [ Module consists of listed files:

<b>File name</b>	<b>Requirements</b>	<b>Description</b>
LinTrcv.c	LinTrcv069	The implementation general c file. It does not contain interrupt routines.
LinTrcv.h	LinTrcv052	It contains only information relevant for other BSW modules (API). Differences in API depending on configuration are encapsulated.
LinTrcv_Cfg.h	LinTrcv083	Pre-compile time configuration parameter file. It's generated by the configuration tool.
LinTrcv_Cfg.c	LinTrcv062	Pre-compile time configuration code file. It's generated by the configuration tool.

] (SRS\_BSW\_00346, SRS\_BSW\_00158)

### 5.1.3 Header file structure

**[SWS\_LinTrcv\_00067]** | The include file structure shall be as follows  
LinTrcv.c shall include Dem.h (needed to notify about production errors)  
LinTrcv.c shall include Det.h (needed to notify about development errors) if default error detection for the module LinTrcv is enabled.  
LinTrcv.c shall include EcuM\_Cbk.h (needed to notify about wakeup of a LIN channel)  
LinTrcv.c shall include Dio.h (DIO APIs needed to access Transceiver pins)  
LinTrcv.c shall include LinTrcv.h (own function prototypes, defines ...)  
LinTrcv.c shall include Icu.h (if ICU APIs needed to perform LIN transceiver hardware interrupts)  
LinTrcv.c shall include Spi.h (if the LIN bus transceiver driver use drivers for Spi to control the LIN bus transceiver hardware)  
LinTrcv.c shall include Linif\_Cbk.h (needed to notify about wakeup of a LIN channel)  
LinTrcv\_Cfg.c shall include LinTrcv.h (own function prototypes, defines ...)  
LinTrcv.h shall include LinTrcv\_Cfg.h  
LinTrcv\_Cfg.h shall include ComStack\_Types.h  
LinTrcv.c shall include Tm.h (needed for wait states for changing transceiver operation modes)  
| (SRS\_BSW\_00301, SRS\_BSW\_00409)

Header include structure 5-1

**[SWS\_LinTrcv\_00068]** | For AUTOSAR standard data types header file Std\_Types.h is included.] (SRS\_BSW\_00348)

**[SWS\_LinTrcv\_00164]** | LinTrcv\_TrcvWakeupModeType and LinTrcv\_TrcvWakeupReasonTyp shall be defined in Lin\_GeneralTypes.h, see also chapter “8.1 Imported types”.] ()

**[SWS\_LinTrcv\_00061]** | Name of compiler specific header file is Compiler.h. All mappings of not standardized keywords of compiler specific scope shall be placed and organized in this compiler specific type and keyword header.] (SRS\_BSW\_00361)

**[SWS\_LinTrcv\_00063]** [ Name of platform specific header file is Platform\_Types.h.  
All integer type definitions of target and compiler specific scope shall be placed and  
organized in this single type header.] (SRS\_BSW\_00353)

SRS_BSW_00325	The runtime of interrupt service	SWS_LinTrcv_00999

	routines and functions that are running in interrupt context shall be kept short	
SRS_BSW_00326	-	SWS_LinTrcv_00999
SRS_BSW_00327	Error values naming convention	SWS_LinTrcv_00050
SRS_BSW_00328	All AUTOSAR Basic Software Modules shall avoid the duplication of code	SWS_LinTrcv_00999
SRS_BSW_00329	-	SWS_LinTrcv_00001, SWS_LinTrcv_00002, SWS_LinTrcv_00005, SWS_LinTrcv_00007, SWS_LinTrcv_00008, SWS_LinTrcv_00012
SRS_BSW_00330	It shall be allowed to use macros instead of functions where source code is used and runtime is critical	SWS_LinTrcv_00999
SRS_BSW_00331	All Basic Software Modules shall strictly separate error and status information	SWS_LinTrcv_00999
SRS_BSW_00333	For each callback function it shall be specified if it is called from interrupt context or not	SWS_LinTrcv_00999
SRS_BSW_00334	All Basic Software Modules shall provide an XML file that contains the meta data	SWS_LinTrcv_00999
SRS_BSW_00335	Status values naming convention	SWS_LinTrcv_00999
SRS_BSW_00336	Basic SW module shall be able to shutdown	SWS_LinTrcv_00999
SRS_BSW_00341	Module documentation shall contains all needed informations	SWS_LinTrcv_00999
SRS_BSW_00342	It shall be possible to create an AUTOSAR ECU out of modules provided as source code and modules provided as object code, even mixed	SWS_LinTrcv_00999
SRS_BSW_00344	BSW Modules shall support link-time configuration	SWS_LinTrcv_00999
SRS_BSW_00346	All AUTOSAR Basic Software Modules shall provide at least a basic set of module files	SWS_LinTrcv_00065
SRS_BSW_00347	A Naming separation of different instances of BSW drivers shall be in place	SWS_LinTrcv_00016, SWS_LinTrcv_00070
SRS_BSW_00348	All AUTOSAR standard types and constants shall be placed and organized in a standard type header file	SWS_LinTrcv_00068
SRS_BSW_00353	All integer type definitions of target and compiler specific scope shall be placed and organized in a single type header	SWS_LinTrcv_00063
SRS_BSW_00355	-	SWS_LinTrcv_00999
SRS_BSW_00357	For success/failure of an API call a	SWS_LinTrcv_00002

	standard return type shall be defined	
SRS_BSW_00358	The return type of init() functions implemented by AUTOSAR Basic Software Modules shall be void	SWS_LinTrcv_00001
SRS_BSW_00359	All AUTOSAR Basic Software Modules callback functions shall avoid return types other than void if possible	SWS_LinTrcv_00999
SRS_BSW_00360	AUTOSAR Basic Software Modules callback functions are allowed to have parameters	SWS_LinTrcv_00999
SRS_BSW_00361	All mappings of not standardized keywords of compiler specific scope shall be placed and organized in a compiler specific type and keyword header	SWS_LinTrcv_00061
SRS_BSW_00369	All AUTOSAR Basic Software Modules shall not return specific development error codes via the API	SWS_LinTrcv_00002, SWS_LinTrcv_00005, SWS_LinTrcv_00007, SWS_LinTrcv_00008, SWS_LinTrcv_00012
SRS_BSW_00371	The passing of function pointers as API parameter is forbidden for all AUTOSAR Basic Software Modules	SWS_LinTrcv_00001, SWS_LinTrcv_00002, SWS_LinTrcv_00005, SWS_LinTrcv_00007, SWS_LinTrcv_00008, SWS_LinTrcv_00012
SRS_BSW_00375	Basic Software Modules shall report wake-up reasons	SWS_LinTrcv_00012
SRS_BSW_00377	A Basic Software Module can return a module specific types	SWS_LinTrcv_00005, SWS_LinTrcv_00007
SRS_BSW_00378	AUTOSAR shall provide a boolean type	SWS_LinTrcv_00999
SRS_BSW_00383	The Basic Software Module specifications shall specify which other configuration files from other modules they use at least in the description	SWS_LinTrcv_00999
SRS_BSW_00384	The Basic Software Module specifications shall specify at least in the description which other modules they require	SWS_LinTrcv_00999
SRS_BSW_00385	List possible error notifications	SWS_LinTrcv_00050
SRS_BSW_00386	The BSW shall specify the configuration for detecting an error	SWS_LinTrcv_00050
SRS_BSW_00398	The link-time configuration is achieved on object code basis in the stage after compiling and before linking	SWS_LinTrcv_00999
SRS_BSW_00399	Parameter-sets shall be located in a separate segment and shall be loaded after the code	SWS_LinTrcv_00999
SRS_BSW_00400	Parameter shall be selected from multiple sets of parameters after code	SWS_LinTrcv_00999

	has been loaded and started	
SRS_BSW_00401	Documentation of multiple instances of configuration parameters shall be available	SWS_LinTrcv_00999
SRS_BSW_00404	BSW Modules shall support post-build configuration	SWS_LinTrcv_00999
SRS_BSW_00405	BSW Modules shall support multiple configuration sets	SWS_LinTrcv_00999
SRS_BSW_00406	A static status variable denoting if a BSW module is initialized shall be initialized with value 0 before any APIs of the BSW module is called	SWS_LinTrcv_00002, SWS_LinTrcv_00007, SWS_LinTrcv_00008, SWS_LinTrcv_00012, SWS_LinTrcv_00105
SRS_BSW_00407	Each BSW module shall provide a function to read out the version information of a dedicated module implementation	SWS_LinTrcv_00008
SRS_BSW_00409	All production code error ID symbols are defined by the Dem module and shall be retrieved by the other BSW modules from Dem configuration	SWS_LinTrcv_00067
SRS_BSW_00410	Compiler switches shall have defined values	SWS_LinTrcv_00999
SRS_BSW_00413	An index-based accessing of the instances of BSW modules shall be done	SWS_LinTrcv_00016
SRS_BSW_00414	Init functions shall have a pointer to a configuration structure as single parameter	SWS_LinTrcv_00001, SWS_LinTrcv_00172, SWS_LinTrcv_00173
SRS_BSW_00416	The sequence of modules to be initialized shall be configurable	SWS_LinTrcv_00999
SRS_BSW_00417	Software which is not part of the SW-C shall report error events only after the DEM is fully operational.	SWS_LinTrcv_00999
SRS_BSW_00422	Pre-de-bouncing of error status information is done within the DEM	SWS_LinTrcv_00999
SRS_BSW_00423	BSW modules with AUTOSAR interfaces shall be describable with the means of the SW-C Template	SWS_LinTrcv_00999
SRS_BSW_00426	BSW Modules shall ensure data consistency of data which is shared between BSW modules	SWS_LinTrcv_00999
SRS_BSW_00427	ISR functions shall be defined and documented in the BSW module description template	SWS_LinTrcv_00999
SRS_BSW_00429	BSW modules shall be only allowed to use OS objects and/or related OS services	SWS_LinTrcv_00999
SRS_BSW_00432	Modules should have separate main processing functions for read/receive and write/transmit data path	SWS_LinTrcv_00999

SRS_BSW_00433	Main processing functions are only allowed to be called from task bodies provided by the BSW Scheduler	SWS_LinTrcv_00999
SRS_Can_01096	The bus transceiver driver shall provide an API to initialize the driver internally and set then all attached transceivers in their pre-selected operation modes	SWS_LinTrcv_00001
SRS_Can_01097	CAN Bus Transceiver driver API shall be synchronous	SWS_LinTrcv_00001, SWS_LinTrcv_00002, SWS_LinTrcv_00005, SWS_LinTrcv_00007, SWS_LinTrcv_00012
SRS_Can_01098	The bus transceiver driver shall support an API to send the addressed transceiver into its Standby mode	SWS_LinTrcv_00002, SWS_LinTrcv_00055
SRS_Can_01099	The bus transceiver driver shall support an API to send the addressed transceiver into its Sleep mode	SWS_LinTrcv_00002, SWS_LinTrcv_00055
SRS_Can_01100	The bus transceiver driver shall support an API to send the addressed transceiver into its Normal mode	SWS_LinTrcv_00002, SWS_LinTrcv_00055
SRS_Can_01101	The bus transceiver driver shall support an API to read out the current operation mode of the transceiver of a specified bus within the ECU	SWS_LinTrcv_00005
SRS_Can_01103	The bus transceiver driver shall support an API to read out the reason of the last wakeup of a specified bus within the ECU	SWS_LinTrcv_00007
SRS_Can_01115	The bus transceiver driver shall support an API to enable and disable the wakeup notification for each bus separately	SWS_LinTrcv_00999
SRS_Lin_01502	The LIN Interface shall support an API for RX/TX notifications.	SWS_LinTrcv_00999
SRS_Lin_01503	An API shall exist that enables the LIN driver to directly copy up to 8 byte directly from/to the frame buffers.	SWS_LinTrcv_00999
SRS_Lin_01504	The usage of AUTOSAR architecture shall be mandatory only in LIN master nodes	SWS_LinTrcv_00999
SRS_Lin_01514	The LIN Interface shall inform an upper layer about wake-up events	SWS_LinTrcv_00066
SRS_Lin_01515	The LIN Interface shall provide an API to wake-up a LIN channel cluster	SWS_LinTrcv_00999
SRS_Lin_01522	LIN-SDU shall be copied consistently for transfer	SWS_LinTrcv_00999
SRS_Lin_01523	There shall be a API call to send the LIN bus to sleep-mode.	SWS_LinTrcv_00999
SRS_Lin_01524	The LIN Driver shall be able to put the	SWS_LinTrcv_00002,

	LIN hardware to a reduced power operation mode if needed	SWS_LinTrcv_00055
SRS_Lin_01534	The AUTOSAR LIN Transport Layer shall support half-duplex physical connections.	SWS_LinTrcv_00999
SRS_Lin_01539	The Transport connection properties shall be statically configured.	SWS_LinTrcv_00999
SRS_Lin_01540	The LIN Transport Layer shall provide an API for initialization.	SWS_LinTrcv_00999
SRS_Lin_01544	Errors shall be handled	SWS_LinTrcv_00999
SRS_Lin_01545	The LIN Transport Layer services shall not be operational before initializing the module.	SWS_LinTrcv_00999
SRS_Lin_01546	The LIN Interface shall contain a Schedule Table Handler.	SWS_LinTrcv_00999
SRS_Lin_01547	The LIN Driver shall support standard UART and LIN optimized HW	SWS_LinTrcv_00999
SRS_Lin_01549	The LIN Interface needs to use a timer service for scheduling	SWS_LinTrcv_00999
SRS_Lin_01551	One LIN Interface shall support one or more LIN Drivers.	SWS_LinTrcv_00999
SRS_Lin_01552	The LIN Driver shall offer a Hardware independent interface.	SWS_LinTrcv_00999
SRS_Lin_01553	The LIN Driver shall fulfill the general SPAL requirements for Basic Software Modules.	SWS_LinTrcv_00999
SRS_Lin_01555	The LIN driver shall have an API which the driver shall use to poll for transmit / receive notifications.	SWS_LinTrcv_00999
SRS_Lin_01556	One LIN driver shall be able to handle more than one LIN channel	SWS_LinTrcv_00999
SRS_Lin_01558	The LIN Interface shall check for successful data transfer	SWS_LinTrcv_00999
SRS_Lin_01560	If a wakeup occurs during transition to sleep-mode, this channel shall go back to the running mode	SWS_LinTrcv_00999
SRS_Lin_01563	The LIN Driver shall provide a notification for wake-up events	SWS_LinTrcv_00066
SRS_Lin_01564	A Schedule Table Manager shall be available	SWS_LinTrcv_00999
SRS_Lin_01566	Transition to sleep-mode shall be handled	SWS_LinTrcv_00002, SWS_LinTrcv_00055
SRS_Lin_01568	The LIN Interface implementation and interface shall be independent from underlying LIN hardware.	SWS_LinTrcv_00999
SRS_Lin_01569	The LIN Interface shall support initialization of each LIN channel separately	SWS_LinTrcv_00999
SRS_Lin_01571	Transmission request service shall be	SWS_LinTrcv_00999

	provided	
SRS_Lin_01572	The LIN Driver shall support the initialization of each LIN channel separately	SWS_LinTrcv_00999
SRS_Lin_01574	It shall be possible to have one instance of the TP for each channel	SWS_LinTrcv_00999
SRS_Lin_01576	The LIN 2.1 specification shall be reused as far as possible	SWS_LinTrcv_00999
SRS_Lin_01577	It shall be compatible to LIN protocol specification	SWS_LinTrcv_00999
SRS_Lin_01579	The AUTOSAR LIN Transport Layer shall be based on the Diagnostic Transport Layer for LIN 2.1.	SWS_LinTrcv_00999
SRS_Lin_01580	The LIN Transceiver Driver shall support separate configuration parameters per bus	SWS_LinTrcv_00074, SWS_LinTrcv_00075
SWS_BSW_00229	Initialization function signature	SWS_LinTrcv_00001

## 7 Functional specification

### 7.1 LIN transceiver driver operation modes

**[SWS\_LinTrcv\_00055]** [ The LIN transceiver driver operation modes are described in the state diagram below.] (SRS\_Lin\_01566, SRS\_Lin\_01524, SRS\_Can\_01098, SRS\_Can\_01099, SRS\_Can\_01100)

The main idea behind this diagram is to support the majority of available LIN bus transceivers in a common model view. Depending on the LIN transceiver hardware, the model may have one or two states more than necessary for a given LIN transceiver hardware, but this will clearly decouple the ComM and EcuM from the used hardware.

Lin Transceiver Operation Modes 7-1

Hint: There are several optional interfaces that might not be needed for current LIN transceiver hardware. E.g. the mode "LINTRCV\_TRCV\_MODE\_STANDBY" might be only an internal state that is used for internal hardware transitions. Especially if functionality of "inhibit pin" is used to control the uC only the states "LINTRCV\_TRCV\_MODE\_SLEEP" and "LINTRCV\_TRCV\_MODE\_NORMAL" are of interest.

The function LinTrcv\_Init() causes a state change to either LINTRCV\_TRCV\_MODE\_SLEEP, LINTRCV\_TRCV\_MODE\_NORMAL or LINTRCV\_TRCV\_MODE\_STANDBY (any of these 3 states belong to the upper state ACTIVE). This depends on the configuration and is independent configurable for each channel.

State	Description
POWER_ON	MCU is fully powered.
NOT_ACTIVE	State of LIN transceiver hardware depend on ECU hardware and on Dio and Port driver configuration. LIN transceiver driver is not initialized and therefore not active.
ACTIVE	The function LinTrcv_Init() was called. It carries LIN transceiver driver to active state. Depending on configuration LIN transceiver driver enters state LINTRCV_TRCV_MODE_SLEEP, LINTRCV_TRCV_MODE_STANDBY or LINTRCV_TRCV_MODE_NORMAL.
LINTRCV_TRCV_MODE_NORMAL	Full bus communication. If LIN transceiver hardware controls MCU power supply, MCU is fully powered. The LIN transceiver driver detects no further wakeup information.
LINTRCV_TRCV_MODE_STANDBY	No communication is possible. If LIN transceiver hardware controls MCU power supply, the MCU is still powered. A wakeup by bus or by a local wakeup event is possible. Note: This is an optional state.
LINTRCV_TRCV_MODE_SLEEP	No communication is possible. If LIN transceiver hardware controls MCU power supply, the MCU is not powered. A wakeup by bus or by a local wakeup event is possible.

If a LIN transceiver driver covers more than one LIN channel, all channels are either in state NOT\_ACTIVE or in state ACTIVE. In state ACTIVE each channel may be in a different sub state.

## 7.2 LIN transceiver hardware operation modes

The LIN transceiver hardware may support more mode transitions than the software. The dependencies and the recommended implementations behaviour are explained in this chapter.

It is up to the implementation to decide which LIN transceiver hardware state is covered by which LIN transceiver driver software state. An implementation has to guarantee that whole functionality of described LIN transceiver driver is given by the implementation.

### 7.3 LIN transceiver wakeup types

There are four different scenarios, which are often called wakeup:

- 1) MCU is not powered, parts of ECU including LIN transceiver hardware are powered. The considered LIN transceiver hardware is in mode `LINTRCV_TRCV_MODE_SLEEP`. A wakeup event on LIN is detected by LIN transceiver hardware. LIN transceiver hardware causes powering of MCU (e.g. via pin “inhibit”). In terms of AUTOSAR this is kept as a cold start and not as a wakeup.
- 2) MCU is in low power mode, parts of ECU including LIN transceiver hardware are powered. Depending on the hardware implementation the considered LIN transceiver hardware is either in mode `LINTRCV_TRCV_MODE_STANDBY` or `LINTRCV_TRCV_MODE_SLEEP`. A wakeup event on LIN is detected by LIN transceiver hardware. LIN transceiver hardware is informing MCU about wakeup. In terms of AUTOSAR this is kept as a wakeup of the LIN channel and of the MCU.
- 3) MCU is in full power mode, at least parts of the ECU including LIN transceiver hardware are powered. Depending on the hardware implementation the considered LIN transceiver hardware is either in mode `LINTRCV_TRCV_MODE_STANDBY` or `LINTRCV_TRCV_MODE_SLEEP`. A wakeup event on LIN is detected by LIN transceiver hardware. LIN transceiver hardware is informing MCU about wakeup or is polled cyclically for wakeup events. In terms of AUTOSAR this is kept as a wakeup of a LIN channel.
- 4) MCU is in full power mode, at least parts of the ECU including LIN transceiver hardware are powered. Depending on the hardware implementation the considered LIN transceiver hardware is either in mode `LINTRCV_TRCV_MODE_STANDBY` or `LINTRCV_TRCV_MODE_SLEEP`. The MCU is now setting the LIN transceiver hardware to mode `LINTRCV_TRCV_MODE_NORMAL` and is waking up the LIN channel. In terms of AUTOSAR this is kept as an internal wakeup of a LIN channel (through MCU).

### 7.4 LIN transceiver wakeup modes

**[SWS\_LinTrcv\_00066]** [ Wakeup notification must be supported by Lin Transceiver driver, therefore LIN transceiver driver covers 2 wakeup modes, internal wakeup by an upper layer or external wakeup by LIN channel.] (SRS\_Lin\_01514, SRS\_Lin\_01563)

- 1) Internal wakeup  
An internal wakeup is initiated by an upper layer, e.g. by calling `LinTrcv_Init()` or `LinTrcv_SetOpMode`.
- 2) External wakeup  
Wakeup detected by LIN transceiver driver is forwarded to the upper layer

through the API LinTrcv\_CheckWakeup which has to be called by the LinIf.

Hint: WakeUp through ISR is not supported by the Lin Transceiver Driver but is only possible through ICU.

**[SWS\_LinTrcv\_00074]** [ Selection of wakeup mode shall be done by configuration parameter LinTrcvWakeUpSupport. (cf. LinTrcv107\_Conf)] (SRS\_Lin\_01580)

**[SWS\_LinTrcv\_00075]** [ Support of wakeup shall be switched on and off for each LIN transceiver channel individually by configuration parameter LinTrcvWakeupByBusUsed. (cf. LinTrcv006\_Conf)] (SRS\_Lin\_01580)

**[SWS\_LinTrcv\_00161]** [ LinTrcv driver shall use the following APIs provided by ICU driver, to enable and disable the wakeup event notification:

- Icu\_EnableNotification
- Icu\_DisableNotification] ()

**[SWS\_LinTrcv\_00162]** [ LinTrcv driver shall enable the ICU channels when the transceiver transmits to standby mode (LINTRCV\_STANDBY)] ()

**[SWS\_LinTrcv\_00163]** [ LinTrcv driver shall disable the ICU channels when the transceiver transmits to Normal mode (LINTRCV\_NORMAL)] ()

Rationale: LinTrcv driver shall avoid the loss of wakeup events.

## 7.5 Error classification

### 7.5.1 Development Errors

**[SWS\_LinTrcv\_00050]** [

Type or error	Relevance	Related error code	Value [hex]
API called with wrong parameter for LIN network	Development	LINTRCV_E_INVALID_LIN_NETWORK	0x01
API called with null pointer parameter	Development	LINTRCV_E_PARAM_POINTER	0x02
API service used without initialization	Development	LINTRCV_E_UNINIT	0x11
API service called in wrong transceiver operation mode	Development	LINTRCV_E_TRCV_NOT_SLEEP LINTRCV_E_TRCV_NOT_NORMAL	0x21 0x22
API service called with invalid mode because optional transition is not enabled	Development	LINTRCV_E_INVALID_TRCV_OPMODE	0x25

\* Assignment is done in a header file of module Dem.] (SRS\_BSW\_00327, SRS\_BSW\_00385, SRS\_BSW\_00386)

<TrcvIdx> represents transceiver index. The symbol is generated for each transceiver that is managed in the transceiver driver module.

Remark:      Development errors are notified to DET.  
                 Production errors are notified to DEM.

### 7.5.2 Runtime Errors

There are no runtime errors.

### 7.5.3 Transient Faults

There are no transient faults.

## 7.6 Error detection

For details refer to the chapters 7.2 “Error classification” & 7.3 “Error Detection” in *SWS\_BSWGeneral*.

## 7.7 Error notification

**[SWS\_LinTrcv\_00105]** [ If development errors are enabled and the state of the LIN Transceiver is NOT\_ACTIVE and a function is called except LinTrcv\_Init or LinTrcv\_GetVersionInfo the corresponding function shall raise the development error code LINTRCV\_E\_UNINIT.] (SRS\_BSW\_00406)

**[SWS\_LinTrcv\_00106]** [ If development errors are enabled and any API that uses the parameter “LinNetwork” receives an invalid value for this parameter this function shall raise the development error code LINTRCV\_E\_INVALID\_LIN\_NETWORK.] ()

**[SWS\_LinTrcv\_00159]** [ If development errors are enabled and any API that uses a pointer as parameter receives a null pointer as parameter shall raise the development error code LINTRCV\_E\_PARAM\_POINTER.] ()

## 7.8 Debugging

For details refer to the chapter 7.1.17 “Debugging support” in *SWS\_BSWGeneral*.

## 7.9 Preconditions for driver initialization

**[SWS\_LinTrcv\_00099]** [ The LIN bus transceiver driver might use drivers for Dio or Spi to control the LIN bus transceiver hardware. Thus these drivers must be available and ready to operate before the LIN bus transceiver driver is initialized.] ()

The LIN transceiver driver may have timing requirements for the initialization sequence and the access to the transceiver device, which must be fulfilled by these used underlying drivers.

The timing requirements might be that

The call of the LIN bus transceiver driver initialization has to be performed very early after power up to be able to read all necessary information out of the transceiver hardware in time for all other users within the ECU.

The runtime of the used underlying services is very short and synchronous to enable the driver to keep his own timing requirements limited by the used hardware device.

The runtime of the driver may be enlarged, as some hardware devices have the need to have the port pin level valid for e.g. 50µs before changing it again to reach a specific state, e.g. sleep.

## 7.10 Instance concept

**[SWS\_LinTrcv\_00016]** [ For each LIN transceiver hardware type an ECU has one LIN transceiver driver instance. One instance serves all LIN transceiver hardware of the same type. ] (SRS\_BSW\_00347, SRS\_BSW\_00413)

## 7.11 Wait states

For changing operation modes, the LIN transceiver hardware may have to perform wait states.

**[SWS\_LinTrcv\_00171]**[ The LIN Transceiver Driver shall use the Time service Tm\_BusyWait1us16bit to realize the wait time for transceiver state changes.] ()

## 7.12 Version checking

For details refer to the chapter 5.1.8 “Version Check” in *SWS\_BSWGeneral*.

## 8 API specification

### 8.1 Imported types

Module	Imported Type
Dio	Dio_ChannelGroupType
	Dio_ChannelType
	Dio_LevelType
	Dio_PortLevelType
	Dio_PortType
EcuM	EcuM_WakeupSourceType
Icu	Icu_ChannelType
Lin_GeneralTypes	LinTrcv_TrcvWakeupModeType
	LinTrcv_TrcvWakeupReasonType
Spi	Spi_ChannelType
	Spi_DataBufferType
	Spi_NumberOfDataType
	Spi_SequenceType
	Spi_StatusType
Std_Types	Std_ReturnType
	Std_VersionInfoType

### 8.2 Type definitions

#### 8.2.1 TrcvConfigType

[SWS\_LinTrcv\_00172]

<b>Name:</b>	LinTrcv_ConfigType	
<b>Type:</b>	Structure	
<b>Range:</b>	implementation specific	--
<b>Description:</b>	Configuration data structure of the LinTrcv module.	

] (SRS\_BSW\_00414)

#### 8.2.2 TrcvModeType

[SWS\_LinTrcv\_00168] [

<b>Name:</b>	LinTrcv_TrcvModeType	
<b>Type:</b>	Enumeration	
<b>Range:</b>	LINTRCV_TRCV_MODE_NORMAL	Transceiver mode NORMAL
	LINTRCV_TRCV_MODE_STANDBY	Transceiver mode STANDBY
	LINTRCV_TRCV_MODE_SLEEP	Transceiver mode SLEEP
<b>Description:</b>	Operating modes of the LIN Transceiver Driver	

] ()

### 8.2.3 TrcvWakeupModeType

#### [SWS\_LinTrcv\_00169]

<b>Name:</b>	LinTrcv_TrvcWakeupModeType	
<b>Type:</b>	Enumeration	
<b>Range:</b>	LINTRCV_WUMODE_ENABLE	The notification for wakeup events is enabled on the addressed network.
	LINTRCV_WUMODE_DISABLE	The notification for wakeup events is disabled on the addressed network.
	LINTRCV_WUMODE_CLEAR	A stored wakeup event is cleared on the addressed network.
<b>Description:</b>	Wake up operating modes of the LIN Transceiver Driver.	

1 ()

### 8.2.4 TrcvWakeupReasonType

#### [SWS\_LinTrcv\_00170]

<b>Name:</b>	LinTrcv_TrvcWakeupReasonType	
<b>Type:</b>	Enumeration	
<b>Range:</b>	LINTRCV_WU_ERROR	Due to an error wake up reason was not detected. This value may only be reported when error was reported to DEM before.
	LINTRCV_WU_NOT_SUPPORTED	The transceiver does not support any information for the wake up reason.
	LINTRCV_WU_BY_BUS	The transceiver has detected, that the network has caused the wake up of the ECU.
	LINTRCV_WU_BY_PIN	The transceiver has detected a wake-up event at one of the transceiver's pins (not at the LIN bus).
	LINTRCV_WU_INTERNALLY	The transceiver has detected, that the network has been woken up by the ECU via a request to NORMAL mode.
	LINTRCV_WU_RESET	The transceiver has detected, that the wake up is due to an ECU reset.
	LINTRCV_WU_POWER_ON	The transceiver has detected, that the wake up is due to an ECU reset after power on.
<b>Description:</b>	This type denotes the wake up reason detected by the LIN transceiver in detail.	

1 ()

## 8.3 Function definitions

### 8.3.1 LinTrcv\_Init

[SWS\_LinTrcv\_00001] [

<b>Service name:</b>	LinTrcv_Init
<b>Syntax:</b>	void LinTrcv_Init( const LinTrcv_ConfigType* ConfigPtr )
<b>Service ID[hex]:</b>	0x00
<b>Sync/Async:</b>	Synchronous
<b>Reentrancy:</b>	Non Reentrant
<b>Parameters (in):</b>	ConfigPtr      Pointer to the selected configuration set.
<b>Parameters (inout):</b>	None
<b>Parameters (out):</b>	None
<b>Return value:</b>	None
<b>Description:</b>	Initializes the Lin Transceiver Driver module.

] (SRS\_BSW\_00310, SRS\_BSW\_00329, SRS\_BSW\_00358, SRS\_BSW\_00371, SRS\_BSW\_00414, SRS\_BSW\_00101, SRS\_Can\_01096, SRS\_Can\_01097, SWS\_BSW\_00229)

[SWS\_LinTrcv\_00173] [ The Configuration pointer configPtr shall always have a NULL\_PTR value] (SRS\_BSW\_00414)

The Configuration pointer configPtr is currently not used and shall therefore be set NULL\_PTR value.

[SWS\_LinTrcv\_00119] [

The function `LinTrcv_Init` shall set the LIN transceiver hardware to the state configured by the configuration parameter `LinTrcvInitState`.

This can be `LINTRCV_TRCV_MODE_NORMAL`, `LINTRCV_TRCV_MODE_STANDBY` or `LINTRCV_TRCV_MODE_SLEEP`.

] ()

[SWS\_LinTrcv\_00146] [

The configuration value `LINTRCV_TRCV_MODE_STANDBY` shall be an optional value for the configuration parameter `LinTrcvInitState`.

] ()

Configuration:

Configuration parameter `LinTrcvInitState` specifies state after call of `LinTrcv_Init`.

Caveats:

The initialization sequence after reset (e.g. power up) is a critical phase for the LIN transceiver driver. The driver will use SPAL functionality (DIO) to access the transceiver hardware. Therefore all necessary BSW drivers must be initialized and usable before.

### 8.3.2 LinTrcv\_SetOpMode

[SWS\_LinTrcv\_00002] [

<b>Service name:</b>	LinTrcv_SetOpMode	
<b>Syntax:</b>	<pre>Std_ReturnType LinTrcv_SetOpMode(     uint8 LinNetwork,     LinTrcv_TrvcModeType OpMode )</pre>	
<b>Service ID[hex]:</b>	0x01	
<b>Sync/Async:</b>	Synchronous	
<b>Reentrancy:</b>	Non Reentrant	
<b>Parameters (in):</b>	LinNetwork	LIN network to which API call has to be applied
	OpMode	The parameter says to which operation mode the change shall be performed.
<b>Parameters (inout):</b>	None	
<b>Parameters (out):</b>	None	
<b>Return value:</b>	Std_ReturnType	<p>E_OK: will be returned if the transceiver state has been changed to the requested mode.</p> <p>E_NOT_OK: will be returned if the transceiver state change is not accepted or has failed or the parameter is out of the allowed range.</p>
<b>Description:</b>	The internal state of the LIN transceiver driver is switched to mode given in the parameter OpMode.	

] (SRS\_BSW\_00310, SRS\_BSW\_00329, SRS\_BSW\_00357, SRS\_BSW\_00369, SRS\_BSW\_00371, SRS\_BSW\_00406, SRS\_Lin\_01566, SRS\_Lin\_01524, SRS\_Can\_01097, SRS\_Can\_01098, SRS\_Can\_01099, SRS\_Can\_01100)

**[SWS\_LinTrcv\_00108] [** The function `LinTrcv_SetOpMode` shall switch the internal state of channel `LinNetwork` to the value of the parameter `OpMode` which can be `LINTRCV_TRCV_MODE_NORMAL`, `LINTRCV_TRCV_MODE_STANDBY` or `LINTRCV_TRCV_MODE_SLEEP`.] **()**

**[SWS\_LinTrcv\_00109] [**

The function `LinTrcv_SetOpMode` shall switch the internal state of channel `LinNetwork` to the value of `LINTRCV_TRCV_MODE_STANDBY` if one of the following conditions is fulfilled:

- a) the channel `LinNetwork` is in mode `LINTRCV_TRCV_MODE_SLEEP` and the optional transition from this mode to `LINTRCV_TRCV_MODE_STANDBY` is enabled.
- b) the channel `LinNetwork` is in mode `LINTRCV_TRCV_MODE_NORMAL` and the optional transition from this mode to `LINTRCV_TRCV_MODE_STANDBY` is enabled.

] **()**

**[SWS\_LinTrcv\_00110] [**

The function `LinTrcv_SetOpMode` shall switch the internal state of channel `LinNetwork` to the value of `LINTRCV_TRCV_MODE_SLEEP` if one of the following conditions is fulfilled:

- a) the channel `LinNetwork` is in mode `LINTRCV_TRCV_MODE_NORMAL`

b) the channel `LinNetwork` is in mode `LINTRCV_TRCV_MODE_STANDBY` and the optional transition from this mode to `LINTRCV_TRCV_MODE_SLEEP` is enabled.

] ()

**[SWS\_LinTrcv\_00147]** ]

The function `LinTrcv_SetOpMode` shall switch the internal state of channel `LinNetwork` to the value of `LINTRCV_TRCV_MODE_NORMAL` if one of the following conditions is fulfilled:

a) the channel `LinNetwork` is in mode `LINTRCV_TRCV_MODE_SLEEP`

b) the channel `LinNetwork` is in mode `LINTRCV_TRCV_MODE_STANDBY` and the optional transition from this mode to `LINTRCV_TRCV_MODE_NORMAL` is enabled.

] ()

### 8.3.3 LinTrcv\_GetOpMode

#### [SWS\_LinTrcv\_00005] [

<b>Service name:</b>	LinTrcv_GetOpMode	
<b>Syntax:</b>	<pre>Std_ReturnType LinTrcv_GetOpMode(     uint8 LinNetwork,     LinTrcv_TrsvModeType* OpMode )</pre>	
<b>Service ID[hex]:</b>	0x02	
<b>Sync/Async:</b>	Synchronous	
<b>Reentrancy:</b>	Reentrant	
<b>Parameters (in):</b>	LinNetwork	LIN network to which API call has to be applied
<b>Parameters (inout):</b>	None	
<b>Parameters (out):</b>	OpMode	Pointer to operation mode of the bus the API is applied to.
<b>Return value:</b>	Std_ReturnType	E_OK: will be returned if the operation mode is detected E_NOT_OK: will be returned, if service request is failed due to development errors or the operation mode is not detected.
<b>Description:</b>	API detects the actual software state of LIN transceiver driver.	

] (SRS\_BSW\_00310, SRS\_BSW\_00329, SRS\_BSW\_00369, SRS\_BSW\_00371, SRS\_BSW\_00377, SRS\_Can\_01097, SRS\_Can\_01101)

**[SWS\_LinTrcv\_00121] [** The function `LinTrcv_GetOpMode` shall return the actual state of the LIN transceiver driver in the parameter `OpMode`.**]** ()

**[SWS\_LinTrcv\_00122] [** If there is no/incorrect communication to the transceiver, the function `LinTrcv_GetOpMode` shall return `E_NOT_OK`.**]** ()

**[SWS\_LinTrcv\_00123] [** If default error detection for the module `LinTrcv` is enabled: If called before the `LinTrcv` module has been initialized, the function `LinTrcv_GetOpMode` shall raise the development error `LINTRCV_E_UNINIT`.**]** ()

**[SWS\_LinTrcv\_00124] [** If default error detection for the module `LinTrcv` is enabled: If called with an invalid network number `LinNetwork`, the function `LinTrcv_GetOpMode` shall raise the development error `LINTRCV_E_INVALID_LIN_NETWORK`.**]** ()

**[SWS\_LinTrcv\_00125] [** If default error detection for the module `LinTrcv` is enabled: If called with `OpMode == NULL`, the function `LinTrcv_GetOpMode` shall raise the development error `LINTRCV_E_PARAM_POINTER`.**]** ()

Configuration:

The number of supported busses is statically set in the configuration phase.

### 8.3.4 LinTrcv\_GetBusWuReason

#### [SWS\_LinTrcv\_00007] [

<b>Service name:</b>	LinTrcv_GetBusWuReason	
<b>Syntax:</b>	<pre>Std_ReturnType LinTrcv_GetBusWuReason(     uint8 LinNetwork,     LinTrcv_TrcevWakeupReasonType* Reason )</pre>	
<b>Service ID[hex]:</b>	0x03	
<b>Sync/Async:</b>	Synchronous	
<b>Reentrancy:</b>	Reentrant	
<b>Parameters (in):</b>	LinNetwork	LIN network to which API call has to be applied
<b>Parameters (inout):</b>	None	
<b>Parameters (out):</b>	Reason	Pointer to wakeup reason of the bus the API is applied to.
<b>Return value:</b>	Std_ReturnType	E_OK: will be returned if the wake up reason is detected  E_NOT_OK: will be returned, if service request is failed due to development errors or the wakeup reason is not detected.
<b>Description:</b>	This API provides the reason for the wakeup that the LIN transceiver has detected in the parameter "Reason". The ability to detect and differentiate the possible wakeup reasons depends strongly on the LIN transceiver hardware.	

] (SRS\_BSW\_00310, SRS\_BSW\_00329, SRS\_BSW\_00369, SRS\_BSW\_00371, SRS\_BSW\_00377, SRS\_BSW\_00406, SRS\_Can\_01097, SRS\_Can\_01103)

**[SWS\_LinTrcv\_00126]** [ The function `LinTrcv_GetBusWuReason` shall return the reason for the wake up that the LIN transceiver has detected in the parameter Reason] ()

**[SWS\_LinTrcv\_00127]** [ If there is no/incorrect communication to the transceiver, the function `LinTrcv_GetBusWuReason` shall return `E_NOT_OK`.] ()

**[SWS\_LinTrcv\_00128]** [ If default error detection for the module `LinTrcv` is enabled: If called before the `LinTrcv` module has been initialized, the function `LinTrcv_GetBusWuReason` shall raise development error `LINTRCV_E_UNINIT`.] ()

**[SWS\_LinTrcv\_00129]** [ If default error detection for the module `LinTrcv` is enabled: If called with an invalid network number `LinNetwork`, the function `LinTrcv_GetBusWuReason` shall raise development error `LINTRCV_E_INVALID_LIN_NETWORK`.] ()

**[SWS\_LinTrcv\_00130]** [ If default error detection for the module `LinTrcv` is enabled: If called with `Reason == NULL`, the function `LinTrcv_GetBusWuReason` shall raise the development error `LINTRCV_E_PARAM_POINTER`.] ()

#### Configuration:

The number of supported busses is statically set in the configuration phase.

#### Caveats:

Be aware that if more than one bus is available each bus may report a different wakeup reason. E.g. if an ECU has LIN, a wakeup by LIN may occur and the incoming data may cause an internal wakeup for another LIN bus.

The LIN transceiver driver has a “per bus” view and does not vote the more important reason or sequence internally. The same may be true if e.g. one transceiver controls the power supply and the other is just powered or un-powered.

### 8.3.5 LinTrcv\_GetVersionInfo

[SWS\_LinTrcv\_00008] [

<b>Service name:</b>	LinTrcv_GetVersionInfo	
<b>Syntax:</b>	<pre>void LinTrcv_GetVersionInfo(     Std_VersionInfoType* versioninfo )</pre>	
<b>Service ID[hex]:</b>	0x04	
<b>Sync/Async:</b>	Synchronous	
<b>Reentrancy:</b>	Reentrant	
<b>Parameters (in):</b>	None	
<b>Parameters (inout):</b>	None	
<b>Parameters (out):</b>	versioninfo	Pointer to version information of this module.
<b>Return value:</b>	None	
<b>Description:</b>	This service provides the version information of this module through the parameter "versioninfo".	

] (SRS\_BSW\_00310, SRS\_BSW\_00329, SRS\_BSW\_00369, SRS\_BSW\_00371, SRS\_BSW\_00406, SRS\_BSW\_00407)

[SWS\_LinTrcv\_00131] [ The function `LinTrcv_GetVersionInfo` shall return the version information of this module. The version information contains all data defined in `Std_VersionInfoType` in “AUTOSAR\_SWS\_StandardTypes”.] ()

[SWS\_LinTrcv\_00134] [ If default error detection for the module `LinTrcv` is enabled: If called with `VersionInfo == NULL`, the function `LinTrcv_GetVersionInfo` shall raise development error `LINTRCV_E_PARAM_POINTER`.] ()

### 8.3.6 LinTrcv\_CheckWakeup

[SWS\_LinTrcv\_00012] [

<b>Service name:</b>	LinTrcv_CheckWakeup	
<b>Syntax:</b>	<pre>Std_ReturnType LinTrcv_CheckWakeup(     uint8 LinNetwork )</pre>	
<b>Service ID[hex]:</b>	0x07	
<b>Sync/Async:</b>	Synchronous	
<b>Reentrancy:</b>	Reentrant	
<b>Parameters (in):</b>	LinNetwork	LIN network to which API call has to be applied.
<b>Parameters (inout):</b>	None	
<b>Parameters (out):</b>	None	
<b>Return value:</b>	Std_ReturnType	E_OK: Will be returned, if a wakeup has been detected.

	E_NOT_OK: Will be returned, if no wakeup has been detected
<b>Description:</b>	Notifies the calling function if a wakeup is detected.

] (SRS\_BSW\_00310, SRS\_BSW\_00329, SRS\_BSW\_00369, SRS\_BSW\_00371, SRS\_BSW\_00375, SRS\_BSW\_00406, SRS\_Can\_01097)

**[SWS\_LinTrcv\_00144]** ] If default error detection for the module LinTrcv is enabled:  
If called before the LinTrcv module has been initialized, the function  
LinTrcv\_CheckWakeup shall raise the development error LINTRCV\_E\_UNINIT.]  
()

**[SWS\_LinTrcv\_00145]** ] If default error detection for the module LinTrcv is enabled:  
If called with an invalid network number LinNetwork, the function  
LinTrcv\_CheckWakeup shall raise the development error  
LINTRCV\_E\_INVALID\_LIN\_NETWORK.] ()

**[SWS\_LinTrcv\_00166]**] The function LinTrcv\_CheckWakeup shall evaluate the  
wakeup on the addressed LIN network. When a wake-up event on the addressed LIN  
network is detected (e.g. dominant bus state or negative edge at wakeup pin), the  
function LinTrcv\_CheckWakeup shall notify the ECU State Manager module  
immediately via the EcuM\_SetWakeupEvent and LinIf via  
LinIf\_WakeupConfirmation callback function.] ()

**[SWS\_LinTrcv\_00167]**] If default error detection for the module LinTrcv is enabled:  
If the addressed LIN network is not in mode LINTRCV\_TRCV\_MODE\_SLEEP, the  
function LinTrcv\_CheckWakeup shall raise the development error  
LINTRCV\_E\_TRCV\_NOT\_SLEEP.] ()

Configuration:

See configuration parameter LinTrcvWakeUpSupport.

### 8.3.7 LinTrcv\_SetWakeupMode

**[SWS\_LinTrcv\_00009]** ]

<b>Service name:</b>	LinTrcv_SetWakeupMode	
<b>Syntax:</b>	Std_ReturnType LinTrcv_SetWakeupMode( uint8 LINNetwork, LinTrcv_TrcevWakeupModeType TrcevWakeupMode )	
<b>Service ID[hex]:</b>	0x05	
<b>Sync/Async:</b>	Synchronous	
<b>Reentrancy:</b>	non Reentrant	
<b>Parameters (in):</b>	LINNetwork	LIN network to which API call has to be applied
	TrcevWakeupMode	Requested transceiver wakeup reason.
<b>Parameters (inout):</b>	None	
<b>Parameters (out):</b>	None	
<b>Return value:</b>	Std_ReturnType	E_OK will be returned if the transceiver state has been changed

		to the requested mode.  E_NOT_OK will be returned, if service request is failed due to development errors or the wakeup mode is not set.
<b>Description:</b>	This API enables, disables and clears the notification for wakeup events on the addressed network.	

] ()

**[SWS\_LinTrcv\_00135] [ Enabled:** If the function `LinTrcv_SetWakeupMode` is called with `TrcvWakeupMode == LINTRCV_WUMODE_ENABLE` and if the `LinTrcv` module has a stored wakeup event pending for the addressed bus, the `LinTrcv` module shall execute the notification within the API call or immediately after (depending on the implementation).] ()

**[SWS\_LinTrcv\_00136] [ Disabled:** If the function `LinTrcv_SetWakeupMode` is called with `TrcvWakeupMode == LINTRCV_WUMODE_DISABLE`, then the notifications for wakeup events are disabled on the addressed network. It is required by the transceiver device and the underlying communication driver to detect the wakeup events and store it internally in order to raise the event when the wakeup notification is enabled again.] ()

**[SWS\_LinTrcv\_00137] [ Clear:** If the function `LinTrcv_SetWakeupMode` is called with `TrcvWakeupMode == LINTRCV_WUMODE_CLEAR`, then a stored wakeup event is cleared on the addressed network. Clearing of wakeup events have to be used when the wake up notification is disabled to clear all stored wake up events under control of the higher layer.] ()

**[SWS\_LinTrcv\_00138] [** If there is no/incorrect communication to the transceiver, the function `LinTrcv_SetWakeupMode` shall return `E_NOT_OK`.] ()

**[SWS\_LinTrcv\_00139] [** If default error detection for the module `LinTrcv` is enabled: If called before the `LinTrcv` has been initialized, the function `LinTrcv_SetWakeupMode` shall raise development error `LINTRCV_E_UNINIT`.] ()

**[SWS\_LinTrcv\_00140] [** If default error detection for the module `LinTrcv` is enabled: If called with an invalid network number `LinNetwork`, the function `LinTrcv_SetWakeupMode` shall raise development error `LINTRCV_E_INVALID_LIN_NETWORK`.] ()

## 8.4 Scheduled functions

This chapter lists all functions provided by the `LinTrcv` module and called directly by the Basic Software Module Scheduler. There are no cyclical called functions provided by Lin Transceiver Driver.

## 8.5 Call-back notifications

There are no callback notifications provided by Lin Transceiver Driver.

## 8.6 Expected Interfaces

In this chapter all interfaces required from other modules are listed.

### 8.6.1 Mandatory Interfaces

This chapter defines all interfaces which are required to fulfill the core functionality of the module.

API function	Description
LinIf_WakeupConfirmation	The LIN Driver or LIN Transceiver Driver will call this function to report the wake up source after the successful wakeup detection during CheckWakeup or after power on by bus.

### 8.6.2 Optional Interfaces

This chapter defines all interfaces which are required to fulfill an optional functionality of the module.

API function	Description
Det_ReportError	Service to report development errors.
Dio_ReadChannel	Returns the value of the specified DIO channel.
Dio_ReadChannelGroup	This Service reads a subset of the adjoining bits of a port.
Dio_ReadPort	Returns the level of all channels of that port.
Dio_WriteChannel	Service to set a level of a channel.
Dio_WriteChannelGroup	Service to set a subset of the adjoining bits of a port to a specified level.
Dio_WritePort	Service to set a value of the port.
EcuM_SetWakeupEvent	Sets the wakeup event.
Icu_DisableNotification	This function disables the notification of a channel.
Icu_EnableNotification	This function enables the notification on the given channel.
Spi_GetStatus	Service returns the SPI Handler/Driver software module status.
Spi_ReadIB	Service for reading synchronously one or more data from an IB SPI Handler/Driver Channel specified by parameter.
Spi_SetupEB	Service to setup the buffers and the length of data for the EB SPI Handler/Driver Channel specified.
Spi_SyncTransmit	Service to transmit data on the SPI bus
Spi_WriteIB	Service for writing one or more data to an IB SPI Handler/Driver Channel specified by parameter.
Tm_BusyWait1us16bit	Performs busy waiting by polling with a guaranteed minimum waiting time.

[SWS\_LinTrcv\_00165] [ LinTrcv driver shall enable/disable ICU channels only if reference is configured for the parameter LinTrcvIcuChannelRef.] ()

### 8.6.3 Configurable interfaces

There are no configurable interfaces for LIN transceiver driver.

## 9 Sequence diagrams

For all wakeup related sequence diagrams please refer to chapter 9 of ECU State Manager.

## 10 Configuration specification

In general this chapter defines configuration parameters and their clustering into containers. In order to support the specification Chapter 10.1 describes fundamentals.

Chapter 10.2 specifies the structure (containers) and the parameters of the module LinTrcv.

Chapter 10.3 specifies published information of the module LinTrcv.

### 10.1 How to read this chapter

For details refer to the chapter 10.1 “Introduction to configuration specification” in *SWS\_BSWGeneral*.

## 10.2 Containers and configuration parameters

The following chapters summarize all configuration parameters. The detailed meanings of the parameters are described in preceding chapters.

### 10.2.1 Variants

Three configuration variants are defined for LIN Transceiver Driver.

#### VARIANT-PRE-COMPILE

In the pre-compile configuration all parameters below that are marked as Pre-compile configurable shall be configurable in a pre-compile manner, for example as #defines.

#### VARIANT-LINK-TIME

The variant VARIANT-LINK-TIME shall include all configuration options of the “VARIANT-PRE-COMPILE”. Additionally, all parameters that are marked as link-time configurable shall be configurable at link time. For example by linking a special configured parameter object file.

#### VARIANT-POST-BUILD

This configuration includes all configuration options of the “VARIANT-LINK-TIME”. Additionally all parameters defined below, as post build configurable shall be configurable post build for example by flashing configuration data.

#### [SWS\_LinTrcv\_00017] [

Only pre-compile time configuration is allowed.

Thus only “VARIANT-PRE-COMPILE” is allowed.] (BSW00397)

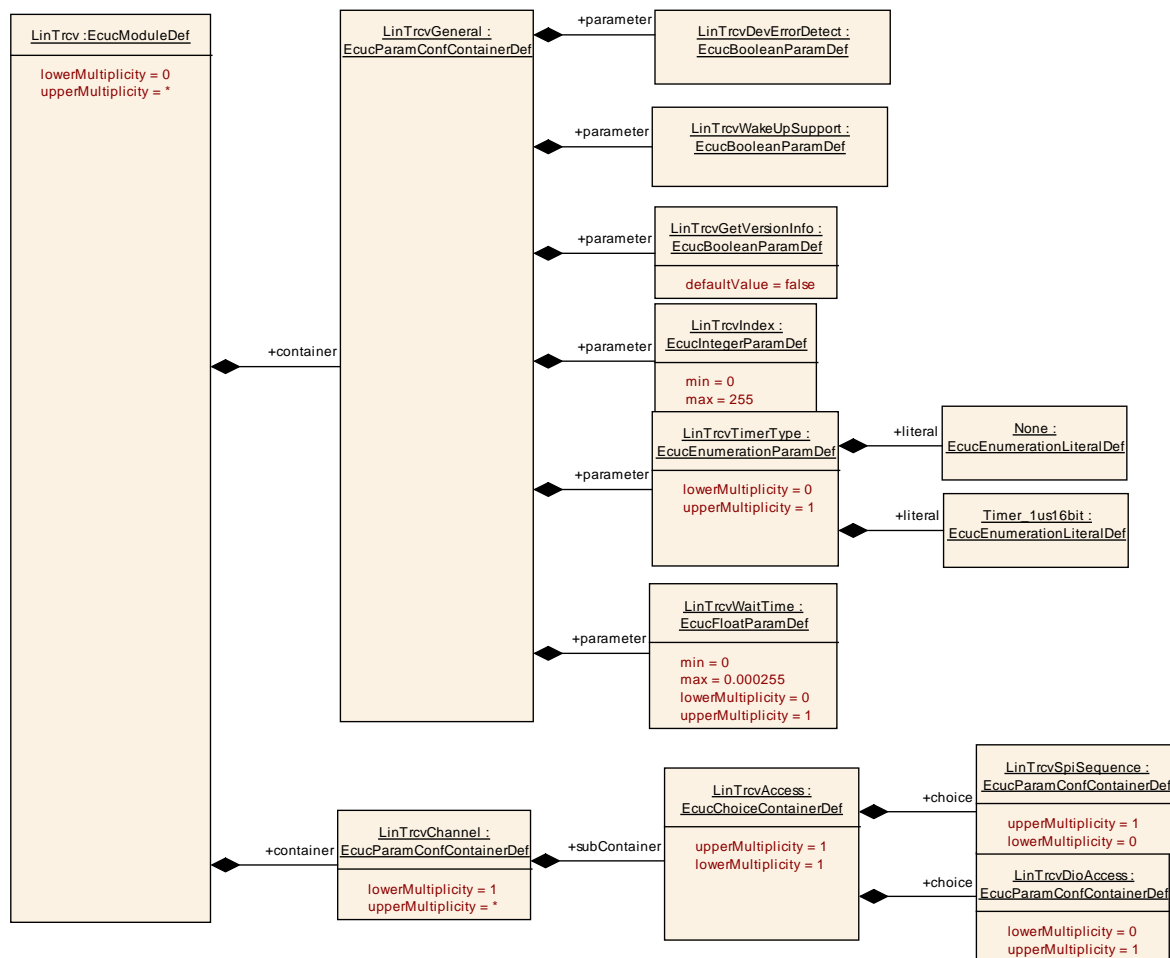

### 10.2.2 General configuration requirements

Configuration information is part of files LinTrcv\_Cfg.h and LinTrcv\_Cfg.c.

### 10.2.3 LinTrcv

<b>Module Name</b>	<i>LinTrcv</i>
<b>Module Description</b>	Configuration of LIN Transceiver Driver module
<b>Post-Build Variant Support</b>	false

<b>Included Containers</b>		
<b>Container Name</b>	<b>Multiplicity</b>	<b>Scope / Dependency</b>
LinTrcvChannel	1..*	Container gives LIN transceiver driver information about a single LIN transceiver channel. Any LIN transceiver driver has such LIN transceiver channels.
LinTrcvGeneral	1	Container gives LIN transceiver driver basic information.

## 10.2.4 LinTrcvGeneral

<b>SWS Item</b>	<b>ECUC_LinTrcv_00090 :</b>
<b>Container Name</b>	LinTrcvGeneral
<b>Description</b>	Container gives LIN transceiver driver basic information.
<b>Configuration Parameters</b>	

<b>SWS Item</b>	<b>ECUC_LinTrcv_00001 :</b>		
<b>Name</b>	LinTrcvDevErrorDetect

<b>SWS Item</b>	<b>ECUC_LinTrcv_00157 :</b>		
<b>Name</b>	LinTrcvIcuChannelRef		
<b>Description</b>	Reference to the IcuChannel to enable/disable the interrupts for wakeups.		
<b>Multiplicity</b>	0..1		
<b>Type</b>	Symbolic name reference to [ IcuChannel ]		
<b>Post-Build Variant Multiplicity</b>	false		
<b>Post-Build Variant Value</b>	false		

<b>Multiplicity Configuration Class</b>	<b>Pre-compile time</b>	X	All Variants
	<b>Link time</b>	--	
	<b>Post-build time</b>	--	
<b>Value Configuration Class</b>	<b>Pre-compile time</b>	X	All Variants
	<b>Link time</b>	--	
	<b>Post-build time</b>	--	
<b>Scope / Dependency</b>	scope: ECU		

<b>SWS Item</b>	<b>ECUC_LinTrcv_00012 :</b>		
<b>Name</b>	LinTrcvWakeupSourceRef		
<b>Description</b>	Reference to a wakeup source in the EcuM configuration. This reference is only needed if LinTrcvWakeupByBusUsed is true. Implementation Type: reference to EcuM_WakeupSourceType.		
<b>Multiplicity</b>	0..1		
<b>Type</b>	Symbolic name reference to [ EcuMWakeupSource ]		
<b>Post-Build Variant Multiplicity</b>	false		
<b>Post-Build Variant Value</b>	false		
<b>Multiplicity Configuration Class</b>	<b>Pre-compile time</b>	X	All Variants
	<b>Link time</b>	--	
	<b>Post-build time</b>	--	
<b>Value Configuration Class</b>	<b>Pre-compile time</b>	X	All Variants
	<b>Link time</b>	--	
	<b>Post-build time</b>	--	
<b>Scope / Dependency</b>	scope: ECU dependency: LinTrcvWakeupByBusUsed		

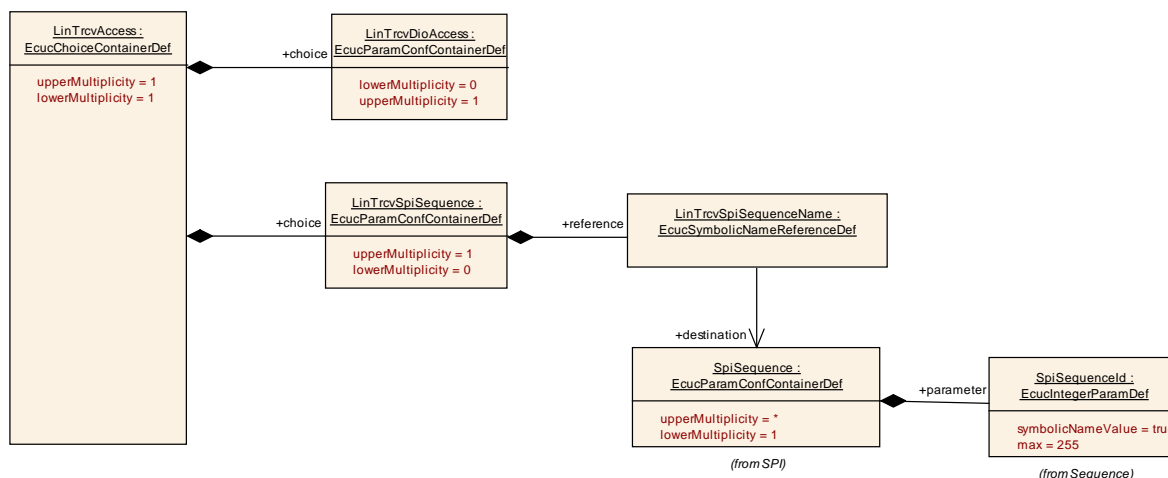

<b>Included Containers</b>		
<b>Container Name</b>	<b>Multiplicity</b>	<b>Scope / Dependency</b>
LinTrcvAccess	1	Container gives LIN transceiver driver access about a single LIN transceiver channel.

## 10.2.6 LinTrcvAccess

<b>SWS Item</b>	<b>ECUC_LinTrcv_00154 :</b>
<b>Choice container Name</b>	LinTrcvAccess
<b>Description</b>	Container gives LIN transceiver driver access about a single LIN transceiver channel.

Container Choices		
Container Name	Multiplicity	Scope / Dependency
LinTrcvDioAccess	0..1	Container gives LIN transceiver driver information about accessing ports and port pins. In addition relation between LIN transceiver hardware pin names and Dio port access information is given. If a LIN transceiver hardware has no Dio interface, there is no instance of this container.
LinTrcvSpiSequence	0..1	Container gives LIN transceiver driver information about one SPI sequence. One SPI sequence used by LIN transceiver driver is in exclusive use for it. No other driver is allowed to access this sequence. LIN transceiver driver may use one sequence to access n LIN transceiver hardware chips of the same type or n sequences are used to access one single LIN transceiver hardware chip. If a LIN transceiver hardware has no SPI interface, there is no instance of this container.

## 10.2.7 LinTrcvDioAccess

<b>SWS Item</b>	<b>ECUC_LinTrcv_00094 :</b>
<b>Container Name</b>	LinTrcvDioAccess
<b>Description</b>	Container gives LIN transceiver driver information about accessing ports and port pins. In addition relation between LIN transceiver hardware pin names and Dio port access information is given. If a LIN transceiver hardware has no Dio interface, there is no instance of this container.
<b>Configuration Parameters</b>	

Included Containers		
Container Name	Multiplicity	Scope / Dependency
LinTrcvDioChannelAccess	1..*	Container gives DIO channel access by single Lin transceiver channel.

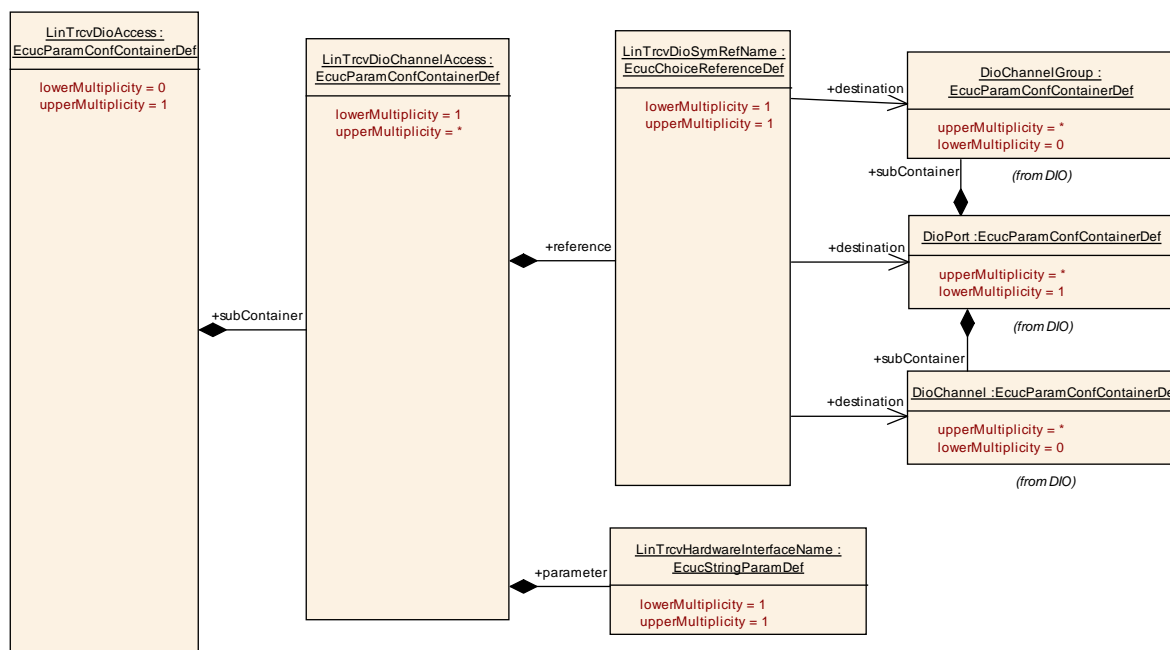

## 10.2.8 LinTrcvDioChannelAccess

<b>SWS Item</b>	<b>ECUC_LinTrcv_00158 :</b>
<b>Container Name</b>	LinTrcvDioChannelAccess
<b>Description</b>	Container gives DIO channel access by single Lin transceiver channel.
<b>Configuration Parameters</b>	

<b>SWS Item</b>	<b>ECUC_LinTrcv_00009 :</b>		
<b>Name</b>	LinTrcvHardwareInterfaceName		
<b>Description</b>	LIN transceiver hardware interface name. It is typically the name of a pin. From a Dio point of view it is either a port, a single channel or a channel group. Depending on this fact either LINTRCV_DIO_PORT_SYMBOLIC_NAME or LINTRCV_DIO_CHANNEL_SYMBOLIC_NAME or LINTRCV_DIO_CHANNEL_GROUP_SYMBOLIC_NAME shall reference a Dio configuration. The LIN transceiver driver implementation description shall list up this name for the appropriate LIN transceiver hardware.		
<b>Multiplicity</b>	1		
<b>Type</b>	EcucStringParamDef		
<b>Default value</b>	--		
<b>maxLength</b>	--		
<b>minLength</b>	--		
<b>regularExpression</b>	--		
<b>Post-Build Variant Value</b>	false		
<b>Value Configuration Class</b>	<b>Pre-compile time</b>	X	All Variants
	<b>Link time</b>	--	
	<b>Post-build time</b>	--	
<b>Scope / Dependency</b>	scope: local		

<b>SWS Item</b>	<b>ECUC_LinTrcv_00102 :</b>		
<b>Name</b>	LinTrcvDioSymRefName		
<b>Description</b>	Choice Reference to a DIO Port, DIO Channel or DIO Channel Group. This reference replaces the LINTRCV_DIO_PORT_SYM_NAME, LINTRCV_DIO_CHANNEL_SYM_NAME and LINTRCV_DIO_GROUP_SYM_NAME references in the Lin Trcv SWS.		
<b>Multiplicity</b>	1		
<b>Type</b>	Choice reference to [ DioChannel , DioChannelGroup , DioPort ]		
<b>Post-Build Variant Value</b>	false		
<b>Value Configuration Class</b>	<b>Pre-compile time</b>	X	All Variants
	<b>Link time</b>	--	
	<b>Post-build time</b>	--	
<b>Scope / Dependency</b>	scope: local		

**No Included Containers**

### 10.2.9 LinTrcvSpiSequence

SWS Item	ECUC_LinTrcv_00155 :
Container Name	LinTrcvSpiSequence
Description	Container gives LIN transceiver driver information about one SPI sequence. One SPI sequence used by LIN transceiver driver is in exclusive use for it. No other driver is allowed to access this sequence. LIN transceiver driver may use one sequence to access n LIN transceiver hardware chips of the same type or n sequences are used to access one single LIN transceiver hardware chip. If a LIN transceiver hardware has no SPI interface, there is no instance of this container.
Configuration Parameters	

SWS Item	ECUC_LinTrcv_00156 :		
Name	LinTrcvSpiSequenceName		
Description	Reference to a Spi sequence configuration container.		
Multiplicity	1		
Type	Symbolic name reference to [ SpiSequence ]		
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	X	All Variants
	Link time	--	
	Post-build time	--	
Scope / Dependency	scope: local dependency: SpiSequence		

#### No Included Containers

## 10.3 Published Information

For details refer to the chapter 10.3 “Published Information” in SWS\_BSWGeneral.
